Dear Hiring Manager,

I'm a passionate full-stack developer with a strong focus on front-end technologies, particularly React and the modern JavaScript ecosystem. I've built several personal and academic projects using React and React Native, and I'm always exploring new JavaScript libraries and tools, whether it's for UI animation, state management, or API integration. I enjoy taking ideas from concept to production and have experience working across both web and mobile platforms.

I recently completed my Computer Programming and Analysis degree from George Brown College, where I developed a wide range of applications from ASP.NET MVC platforms and SQL-backed web systems to blockchain-based tools using Solidity and Go. Beyond code, I've also gained valuable leadership and collaboration experience through my role as a Team Lead at Fusion BPO, where I led cross-functional teams and drove projects to completion.

I'm excited about opportunities that let me build meaningful products, contribute to strong teams, and continue learning and growing in the fast-moving tech space. If you're looking for a creative and committed developer who loves clean UI and smart problem-solving, I'd love to hear from you.

Thanks for visiting!
